DESCRIPTION:

The IDT54/74FCT138/A/C are 1-of-8 decoders built using an advanced dual metal CMOS technology. The IDT54/74FCT138/A/C accept three binary weighted inputs (A₀, A₁, A₂) and, when enabled, provide eight mutually exclusive active LOW outputs (O₀ - O₇). The IDT54/74FCT138/A/C feature three enable inputs, two active LOW (E₁, E₂) and one active HIGH (E₃). All outputs will be HIGH unless E₁ and E₂ are LOW and E₃ is HIGH. This multiple enable function allows easy parallel expansion of the device to a 1-of-32 (5 lines to 32 lines) decoder with just four IDT54/74FCT138/A/C devices and one inverter.

- Stresses greater than those listed under ABSOLUTE MAXIMUM RATINGS may cause permanent damage to the device. This is a stress rating only and functional operation of the device at these or any other conditions above those indicated in the operational sections of this specification is not implied. Exposure to absolute maximum rating conditions for extended periods may affect reliability. No terminal voltage may exceed Vcc by +0.5V unless otherwise noted.
- Inputs and Vcc terminals only.
- Outputs and I/O terminals only.
